A Webinar Hosted By:

Integrated Respiratory Care with VOCSN – 5 Therapies, 1 Device
Tuesday, September 24, 2019 | 1:00pm – 1:45pm EST

Presented by:
Chris Brooks,
Managing Partner, Ventec Life Systems

Featured Speakers:
Dr. Lou Libby,
Founding Board Member of The Oregon and SW ALS Chapter

Pat Quinn,
ALS Hero and Co-Founder of the Ice Bucket Challenge
The ALS Association is proud to partner with Ventec Life Systems to bring you this webinar. The content of this webinar was developed by Ventec Life Systems and is being presented by Chris Brooks, Managing Partner at Ventec Life Systems.*

*The ALS Association has no financial stake in any devices, medication, etc. discussed today, nor does it endorse any particular treatment. For specific medical advice, we encourage you to contact your clinician.
Integrated Respiratory Care with VOCSN for ALS Patients and Caregivers
Table of Contents

- Introduction to Ventec Life Systems
- Traditional Respiratory Devices & Challenges
- Overview of VOCSN Multi-Function Ventilator
- Benefits of Integrated Care
- Reimbursement and Payment Options
- Pat Quinn & Dr. Libby
Ventec Life Systems
VOCSN is designed, developed, and manufactured in the U.S.

• Founded in 2012 by Doug DeVries, creator of the LTV
• History developing 18+ FDA cleared ventilators
• 80+ issued patents, collectively, for technologies prior to and not related to Ventec
• Based in Bothell, Washington
Ventec’s founder, Doug DeVries, was inspired to create VOCSN after his father elected not to use mechanical ventilation following his ALS diagnosis. VOCSN was developed by patients and caregivers to streamline care, extend quality life, and create every day mobility so that no one has to make the same decision as Doug’s dad.
Typical Respiratory Equipment
Ventilator patients usually require numerous medical devices

VENTILATION  OXYGEN  COUGH  SUCTION  NEBULIZER
Challenges of Traditional Devices
VOCSN addresses three common challenges in respiratory care

1. **Complex and time consuming**
   Administering patient care using five devices takes time, creates undo stress for caregivers, and increases the risk for mistakes. Consequently caregivers spend more time managing equipment and less time interacting with patients. Additionally, each device requires specific training to use and regular maintenance to keep working.

2. **Limited portability**
   Ventilator patients wishing to leave their home are often required to transport more than 55 pounds of equipment as well as numerous accessories and multiple extra batteries. Patients are typically confined to their homes due to the logistical burden and power needs of their life-support equipment.

3. **Difficult to switch between therapies**
   Switching between five devices to provide therapies is time consuming and uncomfortable. For example, a patient with a spinal cord injury needing to complete a cough therapy must complete three steps. First, caregivers disconnect the patient from the life support ventilator. Second, the patient is connected to the cough assist device using a separate patient circuit. Third, once the therapy is complete, the patient must reconnect to the ventilator. Switching between devices may take up to 15 minutes, require as many as two caregivers to complete, and expose the patient’s airway to the risk of infection.
VOCSN: Five therapies. One device.
VOCSN is the first and only portable, integrated respiratory system

- Ventilator: 12.4 lb
- Cough Assist: 9.4 lb
- Portable Oxygen Concentrator: 18.4 lb
- Nebulizer: 3.3 lb
- Suction Unit: 11.4 lb

VOCSN Multi-Function Ventilator

Overview

Hospital to Home

Pediatric to Adult

Customizable
Grows with patient needs

FDA Cleared
April 2017
VOCSN Multi-Function Ventilator
Integrated respiratory care

Critical Care Ventilator
Invasive, non-invasive, and mouthpiece ventilation across comprehensive set of modes and settings

6 L/min O2 Concentrator
Only system to deliver ventilation and oxygen together with patented Oxygen Direct system - up to 40% FiO2, can supplement with external O2.

Touch Button Cough
Uninterrupted ventilation, activated in seconds using the same circuit

Hospital Grade Suction
Quiet, easy to transport

High Performance Nebulizer
Records each Rx delivery, automatically turns off when complete
Critical Care Ventilator

• CRITICAL CARE: VOCSN meets the rigorous ISO international standard for safety and accuracy

• COMPREHENSIVE: Combines best in class technology for invasive, non-invasive and mouthpiece ventilation across a comprehensive set of modes and settings

• COMPENSATION: Powerful integrated leak and circuit compensation allow for more accurate ventilation and comfortable breathing
6 L/min Internal Oxygen Concentrator

- INTERNAL CONCENTRATOR: Internal oxygen concentrator capable of delivering the equivalent of 6 L/min of oxygen or up to 40% FiO2

- OXYGEN SOURCES: 3 sources of oxygen including: internal oxygen concentrator, external high-pressure, and low-pressure

- OXYGEN DIRECT: The Oxygen Direct system is three times more energy efficient than existing concentrators, which significantly decreases the size of the oxygen concentrator and maximizes battery life

- ONBOARD FIO2 MONITOR: The VOCSN onboard FiO2 monitor verifies accurate oxygen delivery
Touch Button Cough

• TOUCH BUTTON: Cough therapy at the touch of a button delivered in seconds rather than minutes

• VENTEC ONE-CIRCUIT: No more switching between devices using multiple circuits

• BREATH SYNC: VOCSN monitors patient breathing and triggers a cough at a natural point in the breathing cycle
Hospital Grade Suction

- **HIGH FLOWS:** Hospital grade suction system that provides consistent high flows throughout the entire suction experience

- **QUIET:** More than three times quieter than traditional suction machines

- **VENTEC TRAVEL CANISTER:** 300mL detachable travel canister allows suction on the go
High Performance Nebulizer

• **FLOW COMPENSATION: VOCSN** automatically compensates for the airflow from the nebulizer drive to ensure accurate ventilation and comfortable breathing

• **PROGRAMMABLE AUTO-OFF**: Nebulizer automatically turns off when the therapy duration is complete

• **NOISE MUFFLER**: Sound muffler technology makes the nebulizer drive two times quieter than traditional nebulizer systems
Monitors & Therapy Tracker

- **MONITORS**: Customizable, user can arrange to match charting

- **CONTROL SETTINGS**: To aid clinicians charting activities, an additional page of customizable control settings is visible by pressing the down arrow at the bottom of the Monitors screen to view currently active Ventilation and Oxygen therapy control settings

- **WAVEFORMS**: Accurate waveforms, responsive on screen graphics

- **THERAPY TRACKER**: Stores the most recent 7,300 events, including alarms and changes to control settings which can be downloaded to a USB.
Touch Button Cough Therapy
Integrating ventilation and cough versus traditional devices

- **Reduce Anxiety**: Reduce patient anxiety by ensuring uninterrupted ventilation, because patients should not have to disconnect from their ventilator to cough.

- **Save Time**: Save time by providing Cough therapy in seconds rather than minutes.

- **Reduce Risk of Infection**: May reduce the risk of infection by eliminating the need to frequently disconnect the patient circuit.

- **Increase Compliance**: Increase the use of cough therapy by making it mobile and simpler to use.

- **Humidity with Cough**: Using the Humidifier Bypass, VOCSN is the first system to deliver humidified coughs to patients using heated circuits.

- **Maintain Oxygen Saturation**: Using external high-pressure sources, VOCSN is the first system to deliver cough therapy with supplemental oxygen during inhalation.

- **Uninterrupted Ventilation**: Patients will never again be disconnected from their life support ventilation to cough. Every breath is supported.
Benefits of Integrated Care
VOCSN is Simple, Mobile, and Care Changing

**SIMPLE**
- Ventec One-Circuit™
- Single integrated Ventec-One circuit
- Quick and easy setup

**MOBILE**
- Five therapies in one device
- 70% lighter and smaller than five devices
- Up to 9 hours of on-board battery

**CARE CHANGING**
- Touch Button Cough™
- Uninterrupted ventilation between therapies
- Designed to reduce the risk of infection

1 device to learn
device to clean
alarm to silence

1 device to transport
device to charge
power supply to carry

1 circuit for all therapies
touch to operate
device to monitor
Care Benefits of VOCSN

VOCSN was designed to accomplish the following care goals:

- Increased User and Caregiver Mobility
- Reduced Noise
- Easy to Use Operating System
- User Empowerment
- User Comfort – Uninterrupted Ventilation Using One Circuit for All Therapies
- Reduced Risk of Infection
- Increased User Compliance
Multi-Function Ventilator
A multi-function ventilator is defined as a single device that integrates a ventilator, portable oxygen concentrator, cough stimulator, suction, and nebulizer. VOCSN is the only device that integrates all five therapies and qualifies as a multi-function ventilator.

Eligibility
New Ventilator Users: Any patient that qualifies for a ventilator and at least one of the four additional functions of the device may be eligible for VOCSN under Medicare Part B.

Current Ventilator Users (CMS Transmittal 2206): Current ventilator users that meet one of the equipment rental schedules below are eligible for VOCSN:
- Ventilator users that have used cough, suction, and nebulizer for less than 13 months
- Ventilator users that have used oxygen therapy for less than 36 months
- Ventilator users that own one of the rental items (or reached the 36-month cap for oxygen) but have exceeded the reasonable useful life of five years and are eligible for a new device

Reimbursement
- Monthly rental amount that is higher than traditional portable ventilator
- The multi-function ventilator is classified under the frequent and substantial servicing payment category and payment will be made on a continuous monthly rental basis.
- Medicare, Medicaid, and Private Insurance Coverage under E0467

Talk to your doctor/DME about starting your respiratory therapy with VOCSN
More information at VentecLife.com/E0467
Engineered Tough
All VOCSN components are engineered last beyond preventative maintenance schedules

- Metering Valve: Precision oxygen delivery tested to 30K hours
- Blower: 30K hour life
- O2 Concentrator: 2X more efficient
- Three-Piston Compressor: 30K hour life for O2 concentrator, suction, and nebulizer
- Handle: Tested to 75 lbs.
- Case: Engineered thermoplastic with shock-absorbing shell
- Solenoid Valves: Tested to 130 million cycles
- Lithium-ion Batteries: 500 charge/discharge cycles
- Gorilla® Glass Screen: Maximum scratch and damage resistance
- Pneumatic Connections: Designed to withstand extreme conditions and eliminate leaks
- Ceramic Oxygen Sensors: 10K+ hour life
- Cough Valve: 30K hour life
- Electronics: Designed for maximum reliability
- Centerband: Reinforced thermoplastic for structural rigidity and internal airflow pathways that reduce tube connections and internal leaks
“Until there is a cure for ALS, technology like VOCSN is the cure. The ability to have all of the therapies in one, and switch between therapies with only one circuit, is a game changer for ALS patients, especially for those whose care needs change with ALS progression. The freedom and mobility afforded by VOCSN supports my active living, decreasing the burden of my respiratory needs for me and my caregivers.”
Dr. Lou Libby, VOCSN Prescriber
The Providence ALS Center - Portland, OR

• Founding Board Member of The Oregon and SW Washington Chapter

• National ALS Association Board of Trustees
How to Get VOCSN / Additional Resources

- Learn more at VentecLife.com – video training, sample prescription, comparable ventilation modes, etc.
